

THE NAVITEC AI DIAGNOSTIC

Clarity. Confidence. *Control.*

Know where AI pays off, and where you are exposed. Ten days, over two to four weeks. Human-led. Built for the board. No system access required.

What the Diagnostic gives you

You are already using AI. The Diagnostic gives you a clear view of where it is used, what it risks, and what value is going unclaimed. In two weeks it works through the four questions a leadership team needs answered, and hands back a map you can act on.

The four questions

01 · UNDERSTAND

Understand what is viable. Where AI fits in how your organisation actually works, and where it does not.

02 · FIND

Find what is valuable. Which uses would pay for themselves, ranked by value against feasibility, so the loudest idea does not outrank the best one.

03 · ENSURE

Ensure what is safe. Where you are exposed today, and what the regulation ahead will ask of you.

04 · PLAN

Plan when and how. What to start now, what to build towards, and who owns it, as a phased roadmap.

How it works

Week one, we get the real picture. A session with your sponsors to agree focus and risk appetite, an anonymous usage survey and a few interviews to see what AI is genuinely in use, and a governance and maturity assessment against ISO 42001, the UK direction of travel and the EU AI Act.

Week two, we turn it into direction. We rank the opportunities by value against feasibility, build the roadmap in three phases, start smart, build capability, scale responsibly, and play it back to your leadership team, then hand over the pack.

Ten days of delivery across an elapsed two to four weeks.

What you get

Current AI landscape report

Approved use and shadow AI in one view.

Governance & maturity scorecard

Six domains, with the reasoning shown.

Phased adoption roadmap

Policy, training, tooling and change.

Shadow AI exposure summary

What is running that nobody assessed.

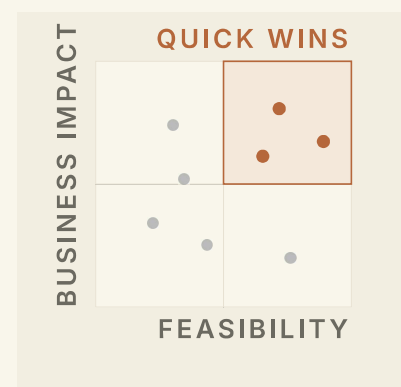

Opportunity heatmap

Value against feasibility, marked by risk.

Executive summary

One page the board reads in the meeting.

Optionally, a reusable survey template and a data-processing review of the tools you rely on.

Value against feasibility. The top right quadrant is where we start.

INVESTMENT

£10,000, ten days of senior delivery over an elapsed two to four weeks, sized to the number of functions you want covered. Low disruption, no system access, and every finding stays private, nothing extracted or stored outside your organisation.

Why Navitec

Two kinds of expertise meet in the work: the depth of your knowledge of your organisation, and the depth of our knowledge of AI, governance, and what is changing fast. We hold Cyber Essentials, ISO 27001 and ISO 9001, and we have delivered AI governance to the ISO 42001 standard for clients in regulated sectors, so the governance we assess you against is governance we run ourselves.

Start smaller, if you would rather. Take the free Assess tool first, a fifteen-minute self-assessment across the same four questions, no call required. The Diagnostic is the two-week version of that same picture.
